

winner | Most Energy Efficient Home

Builder Truewood Constructions Pty Ltd **Contact** Paul Jenkins, 9499 9682
Entry North Fitzroy **Display** Private **Architect** Ric Zenn

This home was designed to be visually outstanding whilst incorporating some of the most energy efficient and sustainable housing ideas to date. From the ground up, sustainable living is the catalyst - from the concrete slab incorporating a solar heating system to the Castlemaine rock wall built at the front facade for its thermal mass and aesthetic appeal. Other design features include its large open spaces and two storey void, the spectacular use of external angled timber blades for shading, double glazing of all windows, good cross ventilation, and the inclusion of two large water tanks and a grey water system.
